Real Time Chat Application (November 13, 2023 - November 11, 2023)
Backend Web App

- This project enables the user to chat in a group with features like password encryption in security,.
- Real-time messaging in live chat, relational databases use-cases, administrative control and controls with appealing, enjoyable and clean user-interface.
- The application code has been written considering all possible errors and edge cases and tries to give a hassle free experience in messaging to the users. Async await with promises have been used extensively to accomplish this.
- To solve the real-time chatting problem statement socket.io has been used extensively to communicate with the http server in real-time.
